

HANA's in-memory computing means that you can organize massive amounts of data and use it in real-time to prioritize your next steps.

- 60 - 80x Faster Queries
- 10x Faster Data Loading
- 9.1x More Data Compression

HANA's real time computing provides a single platform that improves the value of information and accelerates business processes.

Predictive analytics help you anticipate the needs of your business and your customers.

Being proactive in today's competitive market is sometimes easier said than done! SAP has developed HANA database technology so that businesses can use their data to their advantage and get ahead of the planning curve. HANA is an innovation tool designed to manage high data volume at high speed, provide data for complex analysis, and allow you the ability to work with anyone, from anywhere in a simplified platform.

HANA can immediately impact the way you do business on a daily basis. HANA lets you control and plan your workflow and eliminate a reactive business model. You use embedded analytics to help you predict your sales and inventory volume and plan the steps needed to support it.

#### HANA Benefits

- ✓ Real Time Data and Reports
- ✓ Additional Functionality
- ✓ User Focused Analytics
- ✓ Runs in the Cloud or On Premise
- ✓ Business One Extensions Library
- ✓ Priced for Small and Mid-size Businesses

## Analytics

Dashboards operate in real time providing a solid foundation for planning and forecasting. Use analytics to forecast cost, revenue, sales volume, manufacturing requirements, etc. Analytics are highly scalable with out of the box applications and the option to customize to get the exact information you want. Options available include: Crystal Reports, Dashboards, Interactive Analysis, SAP Lumira, and KPI Designer.

SAP Business One for HANA includes 6 dashboards and 4 reports pre-delivered. Additionally, there are 6 pre-delivered semantic layers for powerful interactive analysis reporting. You also have the ability to customize and/or build your own semantic layers with the SAP HANA studio.

## Efficiency

The SAP Business One platform is highly scalable and allows you to manage growth and accomplish more with less. Everything is faster and more effective with HANA.

You will increase employee productivity with the use of freestyle search, styled like Internet searching, with the power to filter and sort results. Users can create and run reports without IT support. Freedom from IT staff means you can focus your efforts on planning and implementing actions that support your bottom line.

## Value

SAP has priced this technology with the small and mid-size business in mind. With the I-BN Cloud Service, you can be up and running at a reasonable cost.
